Welcome to Enriching Scholarship 2009!

This short version gives you the dates, times and locations for all sessions – please visit the website for the description and links to other sessions you might like. Remember we do require registration for all events except the Showcase of UM Projects, described below.

Showcase of UM Projects

9-10, Biomedical Sciences Research Bldg.-Atrium, 109 Zina Pitcher Place (Med. Campus)

Held in conjunction with the keynote address, the showcase sessions offer a look at some of the work the local UM learning community is doing in the areas of serious play, simulation, and educational gaming. Also featured in the Showcase will be posters highlighting the projects of winners of the Teaching Innovation Prize. The Showcase also offers the opportunity to "meet and greet" educators and others interested in using technology in education. **No registration is required for the showcase.** A continental breakfast will be available during the showcase, but **food is not allowed** in the auditorium during the keynote.

Epic Win: Why Gaming is the Future of Learning

10-12, Biomedical Sciences Research Bldg. Auditorium, 109 Zina Pitcher Place (Med. Campus)

Why doesn't the real world seem more like an online game? In the best-designed games, our human experience is perfectly optimized: we have important work to do, we are surrounded by potential collaborators, and we learn quickly and in a low-risk environment. When we're playing a good online game, we get constant useful feedback, we turbo-charge the neurochemistry that makes challenge fun, and we feel an insatiable curiosity about the world around us. None of this is by accident. In fact, game developers have spent three decades figuring out how to make us happier and more collaborative, how to make learning more fun and social, and how to satisfy our hunger for meaning and success. And all of these game-world insights can be applied directly to amplify and augment the way we teach, learn, and do research in the real world. In this talk, you'll learn how online game methods and mechanics can transform our learning communities - and help re-invent higher education as we know it.

Dr. McGonigal is the Director of Game Research & Development at the Institute for the Future in Palo Alto, California.

A continental breakfast will be available starting at 9am during the showcase, but **food is not allowed** into the auditorium.
